

BEFORE YOU START... Evaluate the environment

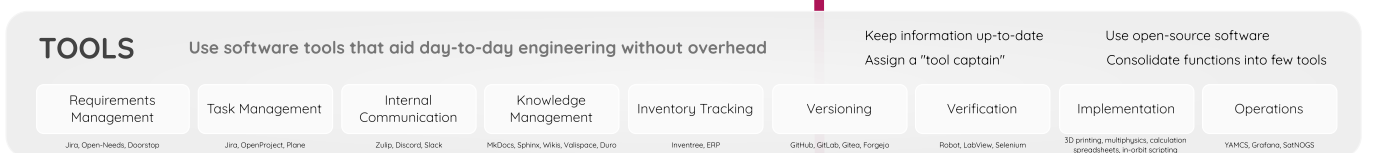

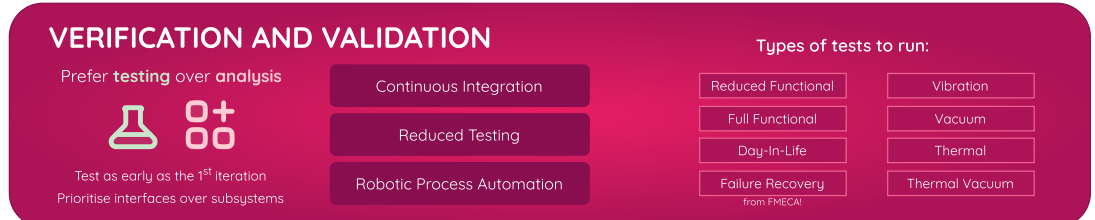

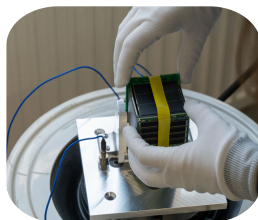

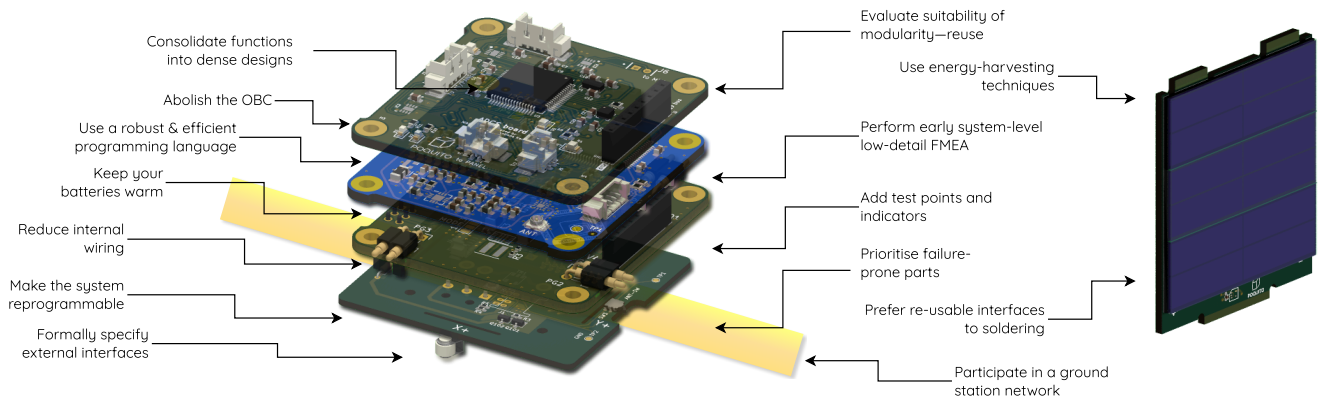

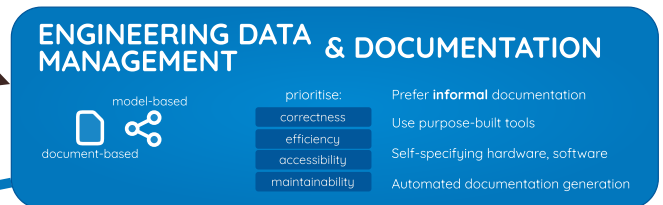

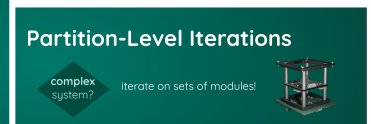

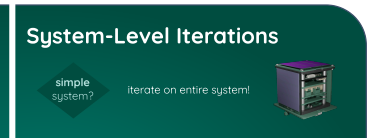

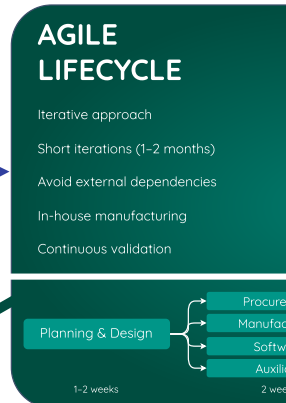

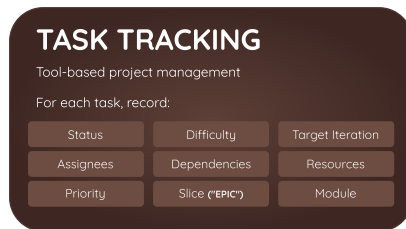

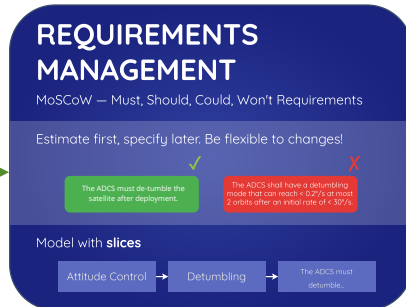

What is the project's form factor?
 What is the project's technical size?
 How many functional requirements are there?
 What is the degree of reuse?
 Have the used technologies been demoed before?
 How much technical risk can be accepted?

Which subsystems need to be implemented?
 How much miniaturisation is required?
 How many features are implemented in HW vs. SW?
 Does the project include mechanical elements?

How large is the team?
 Is the turnover rate high?
 Is the team familiar with the used technologies?
 Does the team have access to technical support?

Does the institution have the required infrastructure in-house?
 What is the available cost budget?
 Does the project have adequate time to achieve its goals?
 Are external stakeholders accessible?
 How volatile are the external requirements?
 How accepting of changes are external stakeholders?
 How many are the formal interface/safety requirements?

SO, YOU HAVE YOUR
MISSION IDEA.
TIME TO BUILD IT!

READY FOR LAUNCH!
